

1

Session Objective:

At the end of the session, the participants will be able to:

- explain** the elements of workplace emergency preparedness program; and
- discuss** basic preparations for common emergencies.

This is the second slide of the presentation. It features a white background with a green and blue gradient header bar at the top. The header bar contains the same three logos and text as the first slide. The main content area is white and contains the section title 'Session Objective:' in bold black font, followed by a horizontal line. Below this, the text 'At the end of the session, the participants will be able to:' is followed by a bulleted list with two items: '-explain the elements of workplace emergency preparedness program; and' and '-discuss basic preparations for common emergencies.' At the bottom of the slide, there is a footer bar with a green and blue gradient, containing the same three logos and text as the header.

2

“Hope for the best, but be prepared for the worst!”

This expression is a blending of what's wished for with what's realistic. It applies to individuals, communities, companies, nations, and specifically to the workplace.

3

Definition of Terms

Emergency – A serious situation or occurrence that demands immediate action.

Disaster – is the result of a calamitous event causing massive death, injury or damage.

4

Natural Emergencies

events that are caused by the forces of nature

- Flood
- Typhoon
- Volcanic Eruption
- Drought
- Earthquake
- Tsunamis

A natural emergency can happen at any time. Some emergencies give warning like a storm preceding a flood. Others, like earthquakes give no warning. Once an emergency happens, the time to prepare is gone and all you can do is cope.

5

Man-made Emergencies

- Industrial Fires
- Structure Collapse
- Chemical Leaks/Spills
- Construction Cave-ins
- Chemical Threats
- Biological Threats
- Bomb Threats or Explosions

Man-made emergencies can be a result of human error, fatigue, poor housekeeping, poor maintenance of equipment, lack of adequate training, or in some cases, a willful intent.

6

Agencies Involved in Dealing with Emergencies

Most developed countries have a number of emergency services operating within them, whose purpose is to provide assistance in dealing with any emergency. They are often government operated as a public service, but in some cases, they may be voluntary organizations, providing the assistance.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

7

Most developed countries operate three core emergency services:

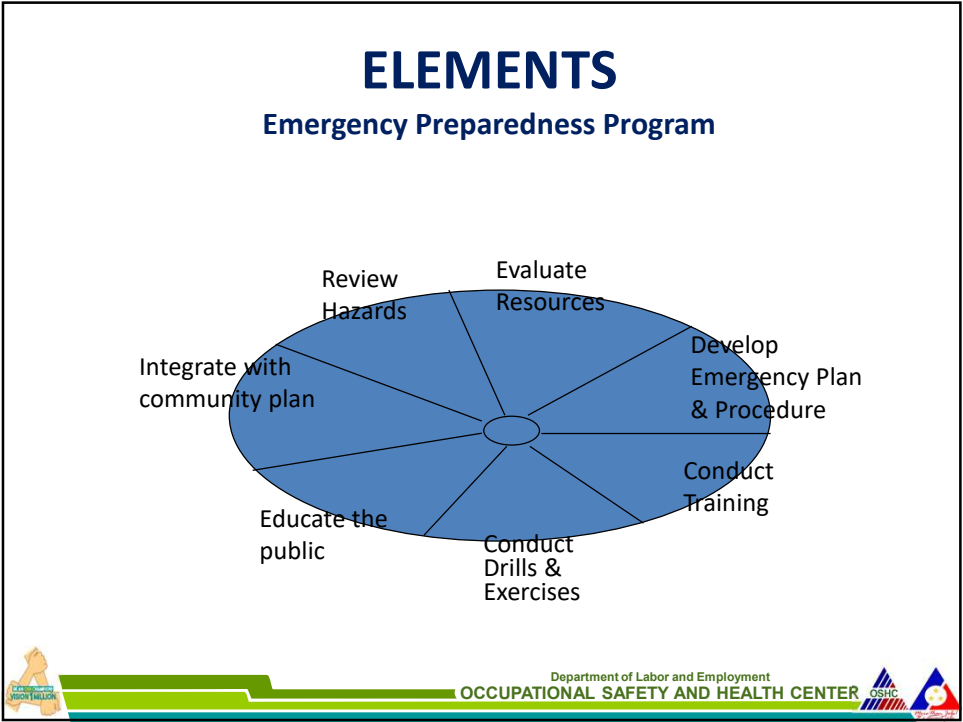

- **Police** – who deal with security of person and property, which can cover all the categories of emergency. They also to some extent deal with punishment of those who cause an emergency through their deliberate actions.
- **Fire service** – who deal with potentially harmful fires, but also often rescue operations such as dealing with road traffic collisions. Their actions help to prevent loss of life, damage to health and damage to or loss of property.
- **Emergency Medical Service** (Ambulance / Paramedic service) – These services attempt to reduce loss of life or damage to health. This service is likely to be decisive in attempts to prevent loss of life and damage to health. In some areas "Emergency Medical Service" is abbreviated to simply EMS.

8

9

ELEMENTS
Emergency Preparedness Program

Review of the Workplace Hazards

- Existing hazards
- Types of potential hazards
- Number of people or things exposed to the hazard and its adverse consequences

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

10

ELEMENTS

Emergency Preparedness Program

Evaluate Resources

- Material Resources
 - Equipment
 - Supplies
- Human Resources
 - Staff Expertise
 - Staff Training

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

11

ELEMENTS

Emergency Preparedness Program

Develop Emergency Plan and Procedures

- Properly document all emergency procedures in a manual or booklet
- Identify prospective members of emergency brigades
 - Fire brigade
 - Disaster control
- Give specialized training to members of emergency brigades

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

12

ELEMENTS

Emergency Preparedness Program

Conduct Training on:

- Information on Different Types of Emergencies
- Good Housekeeping and 5S
- Fire Prevention and Control Methods
- Different Types of Portable Fire Extinguisher
- Hazardous Materials Characteristics
- Risk Assessment

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

13

ELEMENTS

Emergency Preparedness Program

Conduct Drills and Exercises on:

- Emergency Reporting Procedures
- Fire Hose and Nozzle Use
- Fire Fighting Drill using Portable Fire Extinguisher
- Proper First Aid Response
- Evacuation Drills

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

14

ELEMENTS

Emergency Preparedness Program

Educate the Public

- To make neighboring companies know of the facility's effort to ensure safety
- To protect the public during emergencies

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

15

ELEMENTS

Emergency Preparedness Program

Integrate with Community Plan

- Community officials should be involved in the company's emergency planning process and that the company be involved in local planning

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

16

Preparing for Common Emergencies

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

17

Develop an Emergency Plan

- ✓ Identify all exits, stairways and existing floor plans of the work area. Also identify the location of all fire extinguishers, pull stations and any other fire adjunct alarms and fire suppression equipment.
- ✓ Be sure that all emergency phone numbers are clearly listed and are readily available next to telephone.
- ✓ Report all potentially hazardous conditions to your supervisor immediately. Especially focus on conditions or materials, which, in the event of an emergency, might block evacuation routes or in some manner further contribute to the emergency.
- ✓ Do not block or wedge any stairwell doors in the open position at any time.
- ✓ Establish a meeting point or safe refuge area away from the building and other hazards such as overhead power lines
- ✓ Assign someone the responsibility of accounting for all employees in the event of an emergency.
- ✓ Identify First Aid Attendants. Inform and train all personnel on the established and agreed upon means of reporting a medical emergency.
- ✓ Test your plan to make sure that it works.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

18

In Case of Fire ...

- Activate appropriate alarms.
- Stay calm and do not panic. Alert others in your area.
- Evacuate as directed by your supervisor to your designated evacuation area. Walk, do not run. Remain in the evacuation area until the supervisor has accounted for everyone and you have been instructed otherwise.
- Never use an elevator during a fire. Always use the stairwell.
- If there is smoke in the room, stay low (the air is cooler and cleaner closer to the floor); hold a wet cloth over your mouth and nose; and only break windows as a last resort.
- If a door is hot, do not open it. Use an alternate door if one is available and safe to use. If an alternate door is not available, contact someone (if possible) and give them your exact location.
- Close all doors as you leave. Do not lock them.
- If trained to use a fire extinguisher, and the fire is in the incipient stage, you may attempt to extinguish the fire. **Remember** that your own safety is of primary concern.
- Never attempt to put out a fire alone.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

19

Before an Earthquake

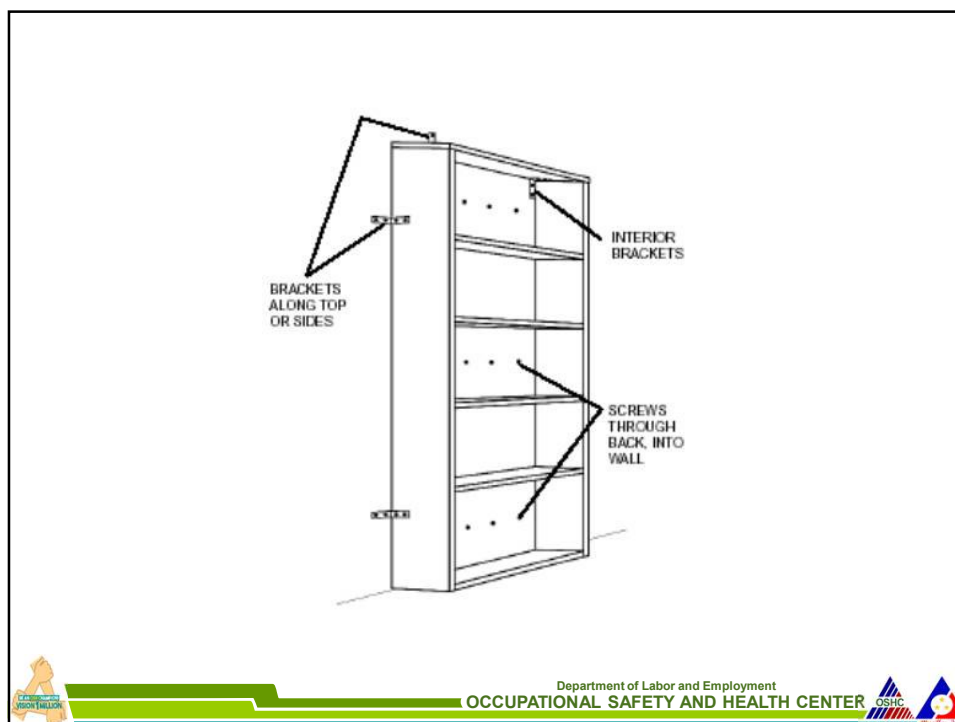

- **Store heavy objects near ground or floor.**
- **Secure tall objects, like bookcases to the wall.**
- **Learn where your exits, evacuation route, and meeting places are.**
- **Keep emergency items , such as a flashlight, first aid kit and spare clothes in your car or office.**

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

20

21

In Case of Earthquake ...

- Duck under something sturdy and cover your head.
- Stay away from windows and objects which may fall on you.
- Do not dash for stairway exits. Do not use elevators.
- If you are inside a building, remain inside until directed otherwise.
- Do not be surprised if the electricity goes out. This is common during an earthquake.
- If an evacuation is necessary, follow the established routes and procedures.
- If you are outside, stay in an open area, which is clear from hazards. When the shaking stops, do not re-enter any building.
- Workers shall remain in the safe refuge area until they have been directed by the appropriate authority to leave the safe refuge area or to return to their workplace

After an earthquake –

- Be prepared for aftershocks. Do not panic, stay calm.
- Check for injured persons and assist as necessary.
- If indoors, your supervisor may initiate an evacuation.
- Replace the telephone hand set if it has fallen off the hook. Use telephones for emergency calls **only**.

22

In Case of a Chemical Spill ...

- ✓ Stay clear of the spill and warn others in the immediate area of the emergency and potential danger.
- ✓ If persons are injured, provide first aid if you or another available individual are trained to do so. However, do not put yourself at risk.
- ✓ Assess the situation and determine if it's an emergency. If it is an emergency, then activate appropriate alarms.
- ✓ Get appropriate Safety Data Sheet (SDS) and have it available for the responders.
- ✓ If an evacuation is required, evacuate as directed by your supervisor to your designated evacuation area. Walk, do not run. Remain in the evacuation area until the supervisor has accounted for everyone and you have been instructed otherwise.
- ✓ Do not re-enter the building until the emergency response team leader has deemed it safe and supervisory personnel have given permission to go back into the facility.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

23

In Case of Severe Weather ...

- Monitor the local government weather service for announcements including warnings and any other information provided by officials, such as the appropriate actions in the event of an emergency.
- Learn the history of flooding in your area. If possible, strive to know the elevation of your facility in relation to streams, rivers, and dams.
- Inspect areas in your facility subject to flooding. Identify records and equipment that can be moved to higher location. Make plans to move records and equipment in case of flood
- Identify the community's evacuation routes. Know where to find higher ground in case of a flood. Be prepared to evacuate to designated safe areas.
- Keep a portable radio, flashlights, whistle, spare batteries and other emergency supplies ready.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

24

If a Flood Occurs ...

- If you are inside, turn off main electrical power.
- Follow the established evacuation procedures for the facility. Make plans for assisting employees who may need transportation.
- If you are outside, never attempt to walk across a flooded area. The water could sweep you away.
- If you are in your car, do not try to drive through flood waters. If your car stalls in rising water, abandon it.

25

Office Emergency Kit Essentials

- | | |
|--|--|
| ✓ Bottled water | ✓ Basic utensils |
| ✓ Canned food, waterproof packages of food rations, and/or energy bars, enough to last each person 3 days. | ✓ Swiss Army knife |
| ✓ Manual can opener | ✓ Plastic plates and cups |
| ✓ Bottle opener | ✓ Dust masks |
| ✓ First aid kit | ✓ Work gloves |
| ✓ Sanitary napkins | ✓ A wrench |
| ✓ Portable bags, such as backpacks or duffle bags in which to store supplies. | ✓ List of local emergency centres. |
| ✓ Whistle | ✓ Water purification chemicals and/or a small container of bleach with an eye dropper. |
| ✓ Emergency blankets | ✓ Flashlight with batteries. |
| ✓ Garbage bags to be used as ponchos, ground cover or blankets. | ✓ Radio with batteries. |
| ✓ Toilet paper | ✓ Extra batteries in waterproof bag (be sure to replace batteries periodically). |
| ✓ Waterproof matches and/or lighter. Do not use either if you smell gas. | ✓ A map of the region. |
| ✓ Glow sticks | ✓ Fire extinguisher |
| | ✓ Pencil and paper in waterproof bag. |

26

Review

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

27

Review questions

1. Enumerate the elements of a workplace emergency plan.
2. _____ serious situation or occurrence that demands immediate action.
3. _____ is the result of a calamitous event causing massive death, injury or damage.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

28

CLEAR POINTS

- Every workplace has to prepare for different types of emergencies that may happen.
- The emergency preparedness program has to be communicated to all.
- Conduct of fire drill should be at least twice a year.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

29

FIRE BRIGADE CONCEPT AND ORGANIZATION

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

30

Objectives of the Fire Brigade

- To enable the building head to conduct an effective fire safety program;
- To provide the organization by how the occupants can combat fires, evacuate the building and prevent damage to lives and properties;
- To provide the building with the means by which a safety consciousness among the building occupants and the community of certain buildings;
- To establish the necessary support and cooperation in the fire prevention and suppression.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

33

Evacuation Drill

Purpose

- To familiarize, train and rehearse the occupants with evacuation procedures so that order and control is maintained in actual emergency.
- To determine if emergency escape facilities are sufficient for orderly evacuation of all occupants.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

34

General Evacuation Procedures

- When you hear an alarm, stop work activities and prepare to evacuate as directed by your supervisor.
- Proceed promptly to the nearest emergency exit. Walk quickly, but **do not** run.
- Do not use elevators, instead use stairways to reach ground level.
- Exit the building and proceed directly to the designated safe assembly area. Safe assembly areas should generally be away from the building, upwind and out of the way of incoming emergency personnel.

Note: During an earthquake, remain in the building until directed to do otherwise.

Department of Labor and Employment
OCCUPATIONAL SAFETY AND HEALTH CENTER

35

Cont.... General Evacuation Procedures

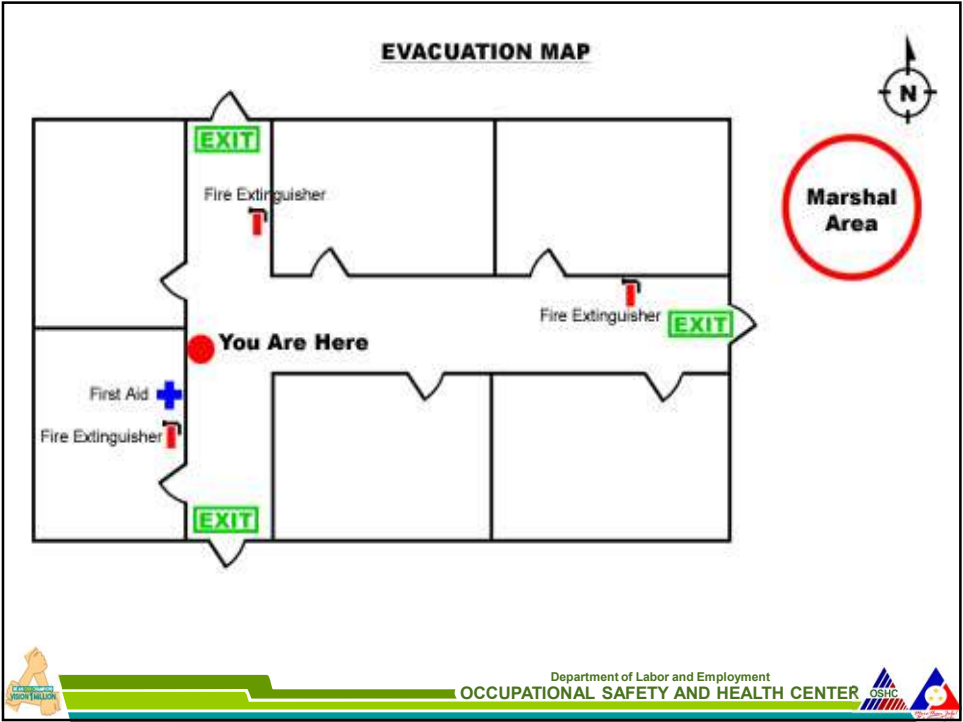

- Remain in the safe assembly area location so that the supervisory personnel may conduct a survey to account for all building personnel. Do not disperse or move to other assembly locations.
- Do not re-enter the building until the emergency response team leader has deemed it safe and supervisory personnel have given permission to go back into the facility.
